DuPont Burnside
Plant

DuPont Chemical Solutions
Enterprise

III. Site Policy

- All process material must be contained within equipment and piping at all times.
- All accidental releases of a reportable quantity into the environment must be immediately reported to the appropriate agencies.
- All releases must be immediately remediated..

IV. Responsibilities

- Site personnel must immediately notify Plant Supervision of any environmental incident.
- Plant Supervision is responsible for regulatory agency notification.
- Plant Supervision must secure the incident and complete a preliminary incident investigation.

Reportable Quantity Release (cont.)

4. Determine if constituents involved have an RQ. Check the list in Section 6.0 of the site Emergency Response and Control Plan for site chemicals or mixtures. Provide best estimate of the quantity of each RQ chemical released.
5. Determine if release is reportable and notify the following agencies within 1 hour.
 - Local LEPC – Ascension and St. James EPC
 - LA State Police
 - LDEQ
 - NRC

Reportable Quantity Release (cont.)

6. If spill is to the Mississippi River, in addition notify the following agencies .
 - US Coast Guard
 - LA DHH
 - Waterworks Warning Network
 - EPA
 - LDEQ Water Division

V. F. Emergency Conditions

Revisions to the definition of "Hospitalization"

Hospitalization - the release causes any **INJURY** requiring hospitalization, defined as "The admission into a hospital as a patient for an overnight stay or emergency treatment at a hospital to the extent that the owner or operator requested such treatment or becomes aware of such treatment within twenty-four (24) hours of the initiation of the relevant release."
